

ApiLifeVar®

ORGANIC SAFE EFFECTIVE

**AGAINST
VARROA**

Product Characteristics

Natural Solution

ApiLifeVar®, based on essential oils (**Thymol, Eucalyptus Oil, Menthol and Camphor**) absorbed on an inert medium, is the **organic solution** for the treatment and prophylaxis in the fight against varroasis in bees (Varroa Destructor) and against tracheal mite (Acarapis Woodi Ren.).

Effectiveness and Reliability

The multiannual experience in using the product and the numerous studies carried out nationally and internationally prove the **high effectiveness** of **ApiLifeVar®** that shows an average drop in varroasis higher than 90%.

How it works: by contact and by “suffocating” the mite who breathes the vapours from the essential oils that saturate the place (beehive) with the consequent detachment and fall of the parasite from the body of the bee.

No Drug Resistance

No drug resistance to **ApiLifeVar®** has been recorded.

Use Safety

All components of **ApiLifeVar®** are totally **safe** for the consumer, the bees and all the products of the beehives; these ingredients are included in Enclosure II of EEC Regulation No. 2377/90 listing the substances that do not have any maximum residue limit (MRL) in animal food and therefore also in honey. Therefore the use of **ApiLifeVar®** excludes any toxicological problem of **residues** in the honey and any other product from the hive.

WITHDRAWAL PERIOD: 0 DAYS

Organic Bee-keeping

Thanks to its natural and safe components, **ApiLifeVar®** is certified, without any limitations, by the Regulations governing ORGANIC BEE-KEEPING for the fight against Varroasis (Reg. 2092/91/EEC and successive Modifications of 24th June 1991).

Use Period

The ideal use period varies according to the climate of the different countries; we recommend anyway that the product be used during the warm season, immediately after the honey harvest.

Temperature of use: 18°C - 35°C (64°F - 95°F)

Advice on Use

- Treat the whole apiary at the same time.
- Avoid the risk of robbing by creating strong families and do not treat if robbing is in course.
- Treat by introducing the product into the beehive either early in the morning or late in the afternoon towards sunset.
- If the temperature is quite high, above 30°C, get the bees accustomed to the product scent by placing a piece of bar in the hive the day before treatment.
- Carry out treatment preferably when there is no honey.
- Do not exceed the recommended dosage.

Easy to Use

1

Open the bag containing the two bars.

2

Take one of the two bars and break it into 3-4 parts.

3

Open the beehive and place the individual pieces of bar in the corners above the honeycomb.

4

Close the hive and let the product work for 7-10 days according to the temperature. Repeat the treatment for 3-4 times with the other bars.

Use of **ApiLifeVar®** in countries and regions characterised by lower temperatures (i.e. Northern Europe, North America):

2 whole bars placed at the same time on the top of the beehive replaced with two more after 14-15 days.

Packaging

Bag containing 2 evaporating bars

Packs of 100 bags
